## Wednesday Challenge Form

Group Members: Alyssa, Yatra, Will

Problem Statement: Make a little gift for the robotics competition.

Approach: I thought of a design of a whistle. So Will and I calculated the measurements and the price for our whistles. Then we planned out the days and our goal of making the whistles.

Solution: We made 72 whistles which was better than the other group but our goal was to make 200 whistles.

Lessons Learned: Plan out and remember that anything can happen so be prepared.
